

# LIGHTS OUT

...Sea turtles dig the dark!

## KEEP IT SHIELDED

Close your curtains or blinds after dark and use shielded, cut-off fixtures or vegetation to cover lightbulbs and direct light downward.

## KEEP IT LOW

Use downlighting, low mounting height, and low bulb wattage.

## KEEP IT LONG

Use red, amber, yellow, or warm lightbulbs and color filters. Sea turtles and other wildlife are less disturbed by these longer wavelengths of light!

## DID YOU KNOW?

Beachfront lighting, skyglow, and other forms of light pollution discourage nesting sea turtles, disorient hatchlings, and disrupt nocturnal wildlife
